

TG Soft Recognized for Testing Excellence

ICSA Labs Excellence in Information Security Testing (EIST) Awards recognize security vendors for outstanding achievement in the area of information security certification testing with ICSA Labs. The award given is based on a company achieving at least five, ten, fifteen, twenty, or twenty-five years of continuous testing with ICSA Labs.

5-Year Excellence in Testing Security Award Winner for 2021

For more than three decades of certification testing, ICSA Labs has accumulated a great deal of experience and knowledge about common weaknesses in security products. We've learned what improves reliability and what tends to detract from it. We've seen first-hand how often problems occur, what types of shortcomings arise most often, and why. We've also seen how vendors respond to these issues and how their actions can affect consumers for better or worse.

Vendors like TG Soft that continuously test their products and maintain security certifications year-after-year gain the most benefit from our world class, independent testing and certification programs. Certified products reduce risk, thereby increasing security, trust, usability and assurance.

It takes dedication, discipline and resources for security product makers to not only navigate through ICSA Labs' rigorous security testing to attain certification, but to continue those efforts to maintain certification. Security vendors that receive the EIST Award have demonstrated their dedication to ICSA Labs' rigorous third-party security testing while manufacturing an effective security product.

Ask for ICSA Labs Certified Products

Security vendors participating in ICSA Labs security-based certification testing programs benefit from the breadth and depth of our over thirty years of testing experience in the information security industry. A certification by an internationally-recognized, independent, third-party organization like ICSA Labs immediately signifies that the tested product was consistently held to a high standard for quality and security effectiveness. Ultimately, the longer a security product participates in ICSA Labs' continuously-evolving certification testing programs, the better the product and the higher the assurance.
